Career Objective

To obtain an internship position where I can apply my knowledge of web development and enhance my skills in HTML, CSS, and basic programming.

Education

B .Tech - IT Knowledge Institute of Technology , Salem

Year: 2025 (2nd Year)

Skills

C ,C++

HTML(basic)

Css(basic)

Projects

1. CONTROLLING RGB LED LIGHT:

An RGB LED contains three LEDs in a single package – red, green, and blue.

By controlling the brightness of each LED using PWM signals, we can generate any desired colour.

It is widely used in decorative lighting, displays, and smart home devices.

With simple microcontrollers like Arduino, the colours can be changed automatically or manually.

This makes RGB LEDs versatile for creative lighting projects and experiments.

Certificate

Web Development Internship – Cod Soft
